

Bird-X Bed Bug Alert

Check for bedbugs **BEFORE** they strike!

Lures and captures adult bedbugs and immature nymphs.

This small plastic detection device contains a proprietary attractant gel that actively lures and traps bedbugs, if they are present. Simply place under the mattress or anywhere bedbugs are suspected, and monitor daily to detect problems before an infestation takes hold.

Bedbugs hide away in cracks and crevices, making them hard to detect. Clear, safe, rigid plastic monitoring device slips between mattress and frame. The special gel attracts and traps bedbugs if they are present – alerting you to their presence before it's too late!

Pests: Bedbugs (adult and nymphs)

Uses: Hotels, motels, backpackers, hostels, homes, apartments, flats, holiday homes, nursing homes, dorms, clothing stores, hospitals, rest and retirement homes and many more.

- **Active & Effective** – proprietary attractant gel actively lures and traps bedbugs
- **Discreet** – small, transparent monitor slips discreetly under the mattress, or into other tight spaces where bedbugs are suspected
- **Durable** – sturdy plastic construction prevents the monitor from being crushed while in use
- **Reusable** – can be checked daily, reinserted and reused
- **Safe** – patented housing is tamper-proof
- **Easy-to-use** – clear viewing window makes inspection simple
- **Early detection** – attracts both adult bedbugs and 2nd instar nymphs
